

Problem 1: Simple Function

Write a Python program that:

- Create a function named `greet()`.
- The function takes a person's name as a parameter.
- Print a greeting message using the name.
- Call the function with any name.

Example:

Enter name: Rahim
Hello Rahim

Problem 2: Simple File Writing

Write a Python program that:

- Ask the user to enter their name.
- Open a file named `name.txt`.
- Write the name into the file.
- Close the file.

Example:

Enter your name: Karim
Name saved successfully.

Submission Instructions

1. Solve both problems using Python.
2. Create a **GitHub repository** for this assignment.
3. Add both Python files to the repository.
4. Use the following file names:
 - `problem1.py`
 - `problem2.py`
5. Run both programs and make sure they produce the correct output.
6. Make sure your GitHub repository is set to **Public**.
7. Copy your GitHub repository link and submit it.
